                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           IDENTITY_NUC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   QΥ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      망
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Ωy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to an isolated human transporter protein that is CC related to the zinc transporter subfamily. Polynucleotides and polypeptides of the invention are useful for treating a disease or condition mediated by human transporter protein. The proteins also provide a target for diagnosing a disease or predisposition to disease mediated by the peptide, and in pharmacogenomic analysis. The peptides are also useful for treating a disorders characterised by absence of, inappropriate or unwanted expression of the protein. The nucleic acids are also useful in drug screening assays and as a target for treatment by the compounds identified through drug screening. The invention also provides vectors for gene therapy in patients with aberrant expression confit the gene encoding the transporter protein. The gene of the invention confits been found to be expressed in humans in the kidney, testis, heart, placenta, small intestine and liver. The gene has been localised to company the current sequence represents the human transporter protein encoding cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

The invention relates to human transporters and ion channels (TRICH) CC and their corresponding nucleic acid sequences. TRICH is useful for Screening an agonist/antagonist that modulates its activity. TRICH is CC useful as an immunogen for preparing antibodies which are useful for CC diagnosing a condition of disease associated with its expression in a Subject, and for detecting and purifying it from a sample. TRICH DNA CC is useful as probe or a primer for assessing toxicity of a test CC compound. Composition comprising TRICH or its agonist is useful for treating a disease or condition associated with decreased expression CC of functional TRICH and composition comprising TRICH antagonist is useful for treating a disease or condition associated with TRICH STRICH Sequence is used in the diagnosis and CC treatment of transport disease or condition associated with TRICH Alzheimer's disease; neurological disorder e.g. diabetes mellitus, angina, Alzheimer's disease; neurological disorder e.g. epilepsy, stroke, CC Huntington's disease; neurological disorder e.g. epilepsy, stroke, CC immunological disorder e.g. acquired immunodeficiency syndrome (AIDS), allergies, atherosclerosis; and cell proliferative disorders e.g. cirrhosis, hepatitis, psoriasis and cancers. TRICH DNA is used in the manised
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Lee EA, Yue H, Lal PG,

The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprises as years a sequence complementary to the complementary to the

CC sequence and an oligonucleotide comprising a sequence complementary to a CC polynucleotide which comprises a 3'-end sequence, where the CC oligonucleotide comprises at least 15 nucleotides and the combination of CC the 5'-end sequence/3'-end sequence is selected from those defined in CC the specification. The primers ere seful for synthesising polynucleotides, in gene therapy. The primers are useful for synthesising polynucleotides, CC particularly full-length cDNAs. The primers are also useful for the CC detection and/or diagnosis of the abnormality of the proteins encoded by CC the full-length cDNAs. The primers allow obtaining of the full-length CDNAs easily without any specialised methods. AAH03166 to AAH13628 and CC AAH13633 to AAH18742 represent human cDNAs sequences; AAAB92446 to CC CAAB95893 represent human amino acid sequences; and AAH13629 to AAH13632 crepresent oligonucleotides, all of which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                            Best

                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprises a 3'-end sequence complementary to a polynucleotide which comprises a 3'-end sequence complementary to a polynucleotide which comprises a 1'-end sequence where the oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the secondification. The primer sets can be used in anticage thereory and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      29-JUL-1999;

                                                                                                                                                                                                                                                                      the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH13633 to AAH13742 represent human cDNA sequences; AAB92446 to AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          full-length cDNAs defined in the specification, and for the and/or diagnosis of the abnormality of the proteins encoded full-length cDNAs -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     WPI;

Novel human transporter proteins, related to zinc transporter subfamily, useful as model for developing human therapeutic targets and serves as target for human therapeutics -

condition mediated by human transporter protein. The proteins also provide a target for diagnosing a disease or predisposition to disease mediated by the peptide, and in pharmacogenomic analysis. The peptides are also useful for treating a disorders characterised by absence of, inappropriate or unwanted expression of the protein. The nucleic acids are also useful in drug screening assays and as a target for treatment by the compounds identified through drug screening. The invention also provides vectors for gene therapy in patients with aberrant expression of the gene encoding the transporter protein. The gene of the invention has been found to be expressed in humans in the kidney, testis, heart, placenta, small intestine and liver. The gene has been localised to human chromosome 1. The current sequence represents the human transporter protein encoding recents of the sequence represents the human transporter protein encoding recents of the sequence represents the human transporter protein encoding recents of the sequence represents the human transporter protein encoding recents of the sequence represents the human transporter protein encoding recents of the sequence represents the human transporter protein encoding recents of the sequence represents the human transporter protein encoding the transporter testification to the sequence represents the human transporter protein encoding the transporter testification to the sequence represents the human transporter testification that the sequence represents the human transporter testification to the sequence represents the sequence represents the human transporter testification to the sequence represents the sequence represents the human transporter testification to the sequence represents the sequence represents the se protein encoding genomic DNA.

Note: This sequence contains 6 single nucleotide polymorphisms (SNP's), but information given in the specification is insufficient to determine their locations within this sequence (see ABN83948-ABN83953 for specification). related to the zinc transporter subfamily. Polynucleotides and polypeptides of the invention are useful for treating a disease regions). transporter that specific is

New cytoplasmic, nuclear, membrane bound and secreted NOVX polypeptides, useful for treating cancers and tumours, lung disorders, haematopoietic disorders, autoimmune diseases and immune disorders

Claim 9; Page 21; 210pp; English.

a vector comprising the nucleic acid; a cell comprising the vector; an anti-Novx antibody; and identifying agents that modulate the expression or activity of Novx. Novx the nucleic acid, antibody and modulators are useful in the diagnosis, treatment or prevention of developmental disorders, endocrine disorders, vascular disorders, infectious disease, anorexia, cancer, neurodegenerative disorders (e.g. Alzheimer's disease, Parkinson's disease, Huntington's disease, multiple sclerosis, and amyotropic lateral sclerosis, acute brain injury (e.g. stroke, head injury and cerebral palsy), central nervous system disorders (e.g. depression, epilepsy and schizophrenia), lung disorders, reproductive disorders, disorders affecting carbohydrate metabolism (e.g. galactosaemia and hereditary fructose intolerance), tissue disorders (e.g. Wiskott-aldrich syndrome, thrombocytopaenia, night blindness ar pick's disease), disorders linked to abnormal angiogenesis, asthma, azoospermia, learning disabilities, facial dysmorphism, autoimmune encephalomyelitis, X-linked severe combined immunodeficiency, seizure migraines, inflammation, autoimmune disorders, disorders affecting sleep, appetite, thermoregulation, pain, perception, hormone secretion and sexual behaviour, immune disorders, haematopoietic disorders or other disorders related to cell signal processing and metabolic pathway modulation, gastrointestinal diseases, respiratory disorders, blood disorders, hepatitis, trauma, regeneration, viral, bacterial or parasitic infections, hyper or hypothyroidism, endometriosis, fertility, hypertension, arteriosclerosis, ischaemia, haemolytic anaemia, Werner syndrome, rheumatoid arthritis, Grave's disease, wound healing, X-lin mental retardation, psychotic and neurological disorders and neuronal degeneration. NOV5a, NOV5b or NOV6-NOV9 polypeptides, their mature form or variant. Also included are a nucleic acid encoding a NOVX protein or variant; invention NOV1b, The relates to an isolated NOVX polypeptide selected from NOV1ac, NOV2a, NOV2b, NOV2c, NOV3a, NOV3b, NOV4a, NOV4b, present sequence encodes a NOVX protein seizures x-linked and

                                                      an inability to clear infections (e.g., viral or bacterial infections), as well as disorders related to abnormal cellular proliferation or differentiation, e.g., leukaemia. They may also be used to control disorders of metabolic imbalance (e.g., disorders of lipopolysaccharide biosynthesis or glycogen synthesis) immunological disorders, cardiovascular disorders, neurological disorders, cellular proliferation and/or differentiation disorders, e.g., cancer, cell motility and adhesion disorders differentiative disorders, red blood cell disorders, viral diseases, neurological disorders, kidney disorders, pain or metabolic disorders, liver disorders, kidney disorders, disorders, disorders, kidney
                                                                                                                                                                                                                                                                                           This invention relates to the DNA and protein sequences of novel isolated 47476, 67210, 49875, 48842, 33201, 83378, 84233, 64708, 85041 or 84234 proteins. The method of the invention is useful for treating a disorder characterised by aberrant activity of 47476, 67210, 49875, 46842, 33201, 83378, 84233, 64708, 85041 or 84334-expressing cell in a 46842, 33201, 83378, 84233, 64708, 85041 or 84334-expressing cell in a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    84233; metal transporter; human; ss; gene; infection; haematopoeitic disorder; blood clotting disorder; cancer; autoimmune disorder; leukaemia; immunological disorder; cardiovascular disorder; neurological disorder; cellular red blood cell disorder; viral disease; neurological disorder
                                                                                                                                                                                                                          subject. The protein molecules can act as novel diagnostic targets and therapeutic agents for controlling aberrant or deficient signal transduction resulting, in e.g., haematopoeitic disorders, including blood clotting disorders, autoimmune disorders, or disorders related blood clotting disorders, autoimmune disorders, or disorders related
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      cDNA encoding

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                     The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for:

(a) assessing whether a patient is afflicted with prostate cancer;
(b) monitoring the progression of prostate cancer in a patient;
(c) assessing the efficacy of a test compound to inhibit prostate cancer in a patient;
(d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient;
(e) selecting a composition for inhibiting prostate cancer in a patient;
(f) assessing the prostate cell carcinogenic potential of a compound;
(g) determining whether prostate cancer has metastasized in a patient;
(h) assessing the aggressiveness or indolence of prostate cancer in a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1459

                                                                                                                                              The invention relates to an isolated nucleic acid molecule (I) com a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of t specification or its complement. (I) is useful for:

(a) assessing whether a patient is afflicted with prostate cancer;

(b) monitoring the progression of prostate cancer in a patient;

(c) assessing the efficacy of a test compound to inhibit prostate
                      (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient;
(e) selecting a composition for inhibiting prostate cancer in a patient;
(f) assessing the prostate cell carcinogenic potential of a compound;
(g) determining whether prostate cancer has metastasized in a patient;
(h) assessing the aggressiveness or indolence of prostate cancer in a patient;
(I) is also useful as a pharmacodyanamic or pharmacogenomic marker.
                                                                                                                                                                                                                                                                     Novel isolated nucleic acid molecule associated with cancerous state prostate cells and correlating with presence of prostate cancer, use for detecting presence of prostate cancer, stage of prostate cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; prostate pharmacogenomic

          The invention relates to an isolated NOVX polypeptide selected from MOV1a, NOV1b, NOV1ac, NOV2a, NOV2c, NOV3a, NOV3b, NOV3b, NOV4a, NOV4b, NOV5b or NOV6-NOV9 polypeptides, their mature form or variant Also included are a nucleic acid encoding a NOVX protein or variant; a vector comprising the nucleic acid; a cell comprising the vector;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      vascular disorder; infectious disease; anorexia; cancer; stroke; neurodegenerative disorder; Alzheimer's disease; acute brain injury; central nervous system disorder; depression; lung disorder; reproductive disorder; tissue disorder; thrombocytopaenia; migraine; angiogenesis; asthma; X-linked severe combined immunodeficiency; inflammation; autoimmune disorder; immune disorder; blood disorder; haematopoietic disorder; gastrointestinal disease; respiratory disorder; hepatitis; fertility; hypertension; arteriosclerosis; ischaemia; rheumatoid arthritis; Grave's disease; wound healing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1390
                                                                                                                     New cytoplasmic, nuclear, membrane bound and secreted NOVX polypeptides, useful for treating cancers and tumours, lun haematopoietic disorders, autoimmune diseases and immune d
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ABK71913 standard;

a

C

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

polylinker; Site_1: Not I; Site_2: Eco RI; NCI_CGAP_Sub8
is a subtracted library derived from NCI_CGAP_Sub5. The
NCI_CGAP_Sub8 library had 2.5 million recombinants. A
single-stranded DNA preparation of NCI_CGAP_Sub5 was used
as a tracer in a subtractive hybridization with a driver
comprising: a pool of clones from NCI_CGAP_Sub5 (INAGE
clone Ids 2732833-2737415, 3068040-3069191; 25% of the
driver population), a pool of clones from NCI_CGAP_Sub4
(INAGE clone Ids 2732592-2729326; 25% of the driver
population), NCI_CGAP_Sub6 (pool AIF-AJU, INAGE Ids
2728969-2733190; 25% of the driver population), and
NCI_CGAP_Sub7 (INAGE Ids 3069192-372318, 3081864-3084550;
25% of the driver population). Subtraction was
performed as previously described (Bonaldo, Lennon &
Soares (1996): Normalization and Subtraction: Two
